```c
// C program to demonstrate print text without ending
//   printf with semicolon

#include <stdio.h>

int main()
{

    if( printf("\n Hello World\n") )
       {
         ; // Semi colon does ?
       }

    // What does a printf return

    // Bigger question - what is if ?

    // What is considered true , false in C

    // Common mistake = , ==

    // If its helps , mention as equal to equal to

    // Make abundant use of printf for debugging

    return 0;
}
```
